DESCRIPTION

The 74AC541 is an advanced high-speed CMOS OCTAL BUS BUFFER (3-STATE) fabricated with sub-micron silicon gate and double-layer metal wiring C^2MOS tecnology.
The 3 STATE control gate operates as two inputs AND such that if either $\overline{G1}$ and $\overline{G2}$ are high, all eight outputs are in the high impedance state.

In order to enhance PC board layout, the 74AC541 offers a pinout having inputs and outputs on opposite sides of the package.
All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
