

CD4099BM/CD4099BC 8-Bit Addressable Latch

General Description

The CD4099B is an 8-bit addressable latch with three address inputs (A0–A2), an active low enable input (\bar{E}), active high clear input (CL), a data input (D), and eight outputs (Q0–Q7).

Data is entered into a particular bit in the latch when that bit is addressed by the address inputs and the enable (\bar{E}) is low. Data entry is inhibited when enable (\bar{E}) is high.

When clear (CL) and enable (\bar{E}) are high, all outputs are low. When clear (CL) is high and enable (\bar{E}) is low, the channel demultiplexing occurs. The bit that is addressed has an active output which follows the data input while all unaddressed bits are held low. When operating in the addressable latch mode ($\bar{E} = CL = \text{low}$), changing more than one bit of the address could impose a transient wrong address. Therefore, this should only be done while in the memory mode ($\bar{E} = \text{high}$, $CL = \text{low}$).

Features

- Wide supply voltage range 3.0V to 15V
- High noise immunity 0.45 V_{DD} (typ.)
- Low power TTL compatibility fan out of 2 driving 74L or 1 driving 74LS
- Serial to parallel capability
- Storage register capability
- Random (addressable) data entry
- Active high demultiplexing capability
- Common active high clear

*AC Parameters are guaranteed by DC correlated testing.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed; they are not meant to imply that the devices should be operated at these limits. The tables of "Recommended Operating Conditions" and "Electrical Characteristics" provide conditions for actual device operation.

Note 2: V_{SS} = 0V unless otherwise specified.

Note 3: I_{OH} and I_{OL} are tested one output at a time.

Note 4: Dynamic power dissipation (P_D) is given by: P_D = (C_{PD} + C_L) V_{CC}²f + P_O; where C_L = load capacitance; f = frequency of operation; for further details, see application note AN-90, "54C/74C Family Characteristics".

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
